Work Experience

VIETNAM SILICON Feb 2025 - Present

Senior Frontend Developer & Team Lead

Leading frontend architecture and team development for agricultural transformation platform.

- Lead a team of 5 frontend developers in architecting and delivering an Agricultural Durian Transformation platform serving 20+ team members across multiple projects.
- Drove architectural transformation from client-heavy SPA to React Server Components (RSC) paradigm, leveraging Next.js App Router's server-first rendering strategy, streaming SSR capabilities, and server/client component composition patterns to eliminate waterfall requests and optimize data colocation.
- Designed and implemented monorepo infrastructure strategy (1 repo per web app), establishing shared component libraries, unified design system, consistent CI/CD workflows, and deployment patterns across multiple applications.
- Established technical standards and best practices using Next.js 15 App Router, Material-UI v7, TanStack Query for client-side state, and Zod validation. Conducted code reviews and mentored junior developers on RSC patterns and server/client boundary optimization.

CODELEAP Oct 2023 - Dec 2024

Senior Frontend Developer & Technical Lead

Architected and delivered high-impact features for enterprise client projects, focusing on modernization and scalability.

- Led 2-member team in migrating EnBW's legacy AngularJS 1.x electricity management platform to modern React architecture, handling complex geospatial visualizations, real-time filtering systems, and data-intensive table operations serving utility operations across Germany.
- Architected advanced data table infrastructure using TanStack Table v8 with custom column virtualization, server-side sorting/filtering pipelines, and Jotai atoms for granular state management of 100K+ electricity meter records with map-table synchronization.
- Developed home automation dashboard for Enode platform using Next.js 14 with React Server Components, exploring RSC patterns for IoT device data fetching, real-time energy monitoring, and smart home control interfaces.
- Built recruitment platform features using Vue 3 Composition API, TypeScript, and Pinia for candidate pipeline management, and interview scheduling.
- Attended Agile development practices including sprint planning, daily stand-ups, backlog grooming, and retrospectives, while utilizing Jira for project tracking and team collaboration.

AIR360 Oct 2023 - Nov 2024

Senior Frontend Developer

Developed of core analytics features for Air360's internal product platform.

- Developed and optimized website analytics features for Air360 platform using Vue 3, Nuxt Bridge, and Pinia, integrated with CubeJS for data analytics and ASP.NET Core backend services.
- Implemented Chrome extension dashboard utilizing Vue 3 and Vite, enhancing user monitoring and analytics capabilities.
- Implemented end-to-end testing framework using WebdriverIO, improving application reliability and automated test coverage across features.
- Attended weekly online meetings to confirm objectives and daily meetings for planning (SCRUM model).

ARCHWAY FACTORY April 2016 - Oct 2022

Developer

Designed and implemented of awareness applications for consulting initiatives.

- Designed and implemented StaffServices web application using Vue/Nuxt for frontend architecture, SpringBoot for RESTful APIs, and Azure Cloud services for deployment and hosting.
- Developed prototype, PoC, and MVP single-page applications utilizing Vue2 and Nuxt2 for frontend, integrated with SpringBoot and ASP.NET Core REST APIs, and Azure Functions for serverless architecture.
- Implemented secure authentication and authorization using OAuth2.0 workflow for third-party integrations including Keycloak, Zoho CRM and Azure AD, while developing reusable Vue components.
- Architected and deployed JAMStack-based websites using modern static site generators (VuePress, VitePress, Nuxt, Jekyll) with deployments on Netlify and Vercel platforms.
- Established CI/CD pipelines using GitLab, GitHub Actions, and Azure DevOps. Configured Kubernetes deployments with Docker, Helm, and Ingress for microservices architecture on Azure/GCP Cloud.
- Implemented comprehensive testing strategy using JUnit and Cypress for unit, integration, and end-to-end testing, ensuring application reliability and quality.
- Actively participated in Agile/Scrum ceremonies, collaborating with cross-functional teams to prioritize features, manage sprints, and deliver projects using Jira/Confluence for efficient project management.

INTEC VIETNAM Sep 2013 - 2015

Developer

Developed internal source projects using VB6, ASP.Net MVC, and Java for learning and testing purposes.

Skills

Programming Languages: JavaScript, TypeScript, C#, Java, GraphQL, HTML/CSS, SQL.

Databases: Redis, PostgreSQL.

Frameworks/Libraries: React.js, Next.js, Vue, Nuxt, .Net Core, SpringBoot.

Tools & DevOps: Docker, Kubernetes, GitOps, CI/CD.

Platforms: GitHub, Azure, Amazon Web Services, Google Cloud Platform.

Languages: English (Professional), Japanese (N4), Vietnamese (Native).

Education

University Of Science
Ho Chi Minh, Vietnam • 2009 - 2013
Bachelor of Science in Computer Science

Interests

Open-source development, riding, chess, biking, traveling, hat and fashion.
